Re: Standard Constructors, Inc.

The Texas Gulf Coast Chapter is proud to support our member, Standard Constructors Inc., in their entry into the 2013 ABC Excellence in Construction Award Program. This chapter does not hold an EIC competition; however, we are fully aware of the quality work of this contractor, in particular the Velasco Drainage Ditch project in our area. Therefore, this letter is sent to acknowledge and affirm their bid for this award as a loyal member of our chapter.

Standard Constructors, Inc. has been a member in good standing since June 2006. Aaron Smith, Safety Director for Standard Constructors, has presented a letter and photos in review of their project for Dow Chemical Co. (Oyster Creek) in Freeport, Texas. Their challenge was the construction of a heavy haul bridge over the Velasco Drainage Ditch for large oversized vessels to gain access to the Dow Chemical Oyster Creek facility. This project was completed ahead of schedule on August 13, 2013 with zero recordable injuries or incidents.

It is evident that Standard Constructors' owners and employees worked collaboratively as a team along with Fluor, the General Contractor, to reach the goal of completing quality work on time, within budget and with zero accidents or incidents.

The Texas Gulf Coast Chapter is proud of this special achievement by Standard Constructors, Inc. and believes this project represents the high standards of the Excellence in Construction Award.

Respectfully,

Terry McAlister, President & CEO
ABC Texas Gulf Coast Chapter
